

The AZOGCC has statutory responsibility to regulate the drilling for and production of oil, gas, h

The AZOGCC consists of five members appointed by the Governor and one ex-officio member, the Stat

### Featured Publications: Arizona Has Helium

The current posted price of \$62.25 per Mcf has increased interest in the hunt for helium. Some of the richest helium-bearing gas in the world is currently being produced in Arizona. Helium concentrations range from trace amounts up to ten percent in the Holbrook Basin and Four Corners. Both areas have good potential for additional discovery and production of helium. This potential was the focus of the Arizona Geology published in winter 2003. [Download Here](#)

## Also: Want to Drill an Oil Well?

This Arizona Geology published in spring 2003 describes the process of exploring and drilling for oil and gas in Arizona. [Download Here](#)

## Also: Is Carbon Sequestration in Arizona's Future?

This Arizona Geology published in spring 2008 describes potential geologic carbon-sequestration sites in Arizona. The West Coast Carbon Sequestration Partnership (WESTCARB) and Arizona Public Service (APS) are currently testing one of the sites (see announcements below). [Download Here](#)

### ▣ Announcements

- **WESTCARB and APS are drilling a carbon sequestration test hole at the Cholla power plant**
- **AZOGCC at the State Land Department in Phoenix on October 16, 2009.**
- **Free Reports available for download** [OFR 08-17](#) and [OFR 02-01](#) (download does not include
